WELCOME

Message from the AAPD President

Dear Esteemed Delegates, Colleagues, and Honoured Guests,

On behalf of the Asian Academy of Preventive Dentistry (AAPD) and the Organising Committee, it is my distinct honour to welcome you to the **18th International Conference of the Asian Academy of Preventive Dentistry (18th ICAAPD)**, held from **30th September to 2nd October 2026**.

Sixteen years after Malaysia hosted the 9th ICAAPD in 2010, we are thrilled to welcome our regional and global dental community back to Malaysian shores. Guided by our central theme, **"Empowering Communities Through Preventive Dentistry,"** this conference serves as a premier platform to share cutting-edge science, foster regional collaboration, and address pressing oral health challenges across Asia.

Our scientific programme offers a comprehensive schedule of pre-conference workshops, plenary lectures, high-level panel discussions, and symposia organised into key core domains of **Clinical Innovations & Regenerative Care, Digital Dentistry & Contemporary Risk Landscapes, Public Health, Policy & Universal Coverage and Lifespan Preventive Strategies**.

Beyond our scientific schedule, we invite you to join us for our **Gala Dinner and Cultural Performance on 1st October 2026**, an evening dedicated to celebrating international fellowship and experiencing Malaysia's rich cultural heritage.

Set at the stunning **Hilton Kota Kinabalu, Sabah**, our venue offers world-class facilities in the heart of the city. Its prime location provides convenient access to local attractions and serves as an ideal gateway to explore the breathtaking natural wonders of **Sabah, Malaysian Borneo**.

I extend my sincere appreciation to the Malaysian Association of Dental Public Health Specialists (MADPHS), the Ministry of Health, the Ministry of Defence, Ministry of Higher Education, key government agencies, our academic collaborators, and industry partners for their collective support. Most of all, thank you for joining us on this impactful journey.

May your time at 18th ICAAPD be enriching, collaborative, and memorable.

Warmest regards,

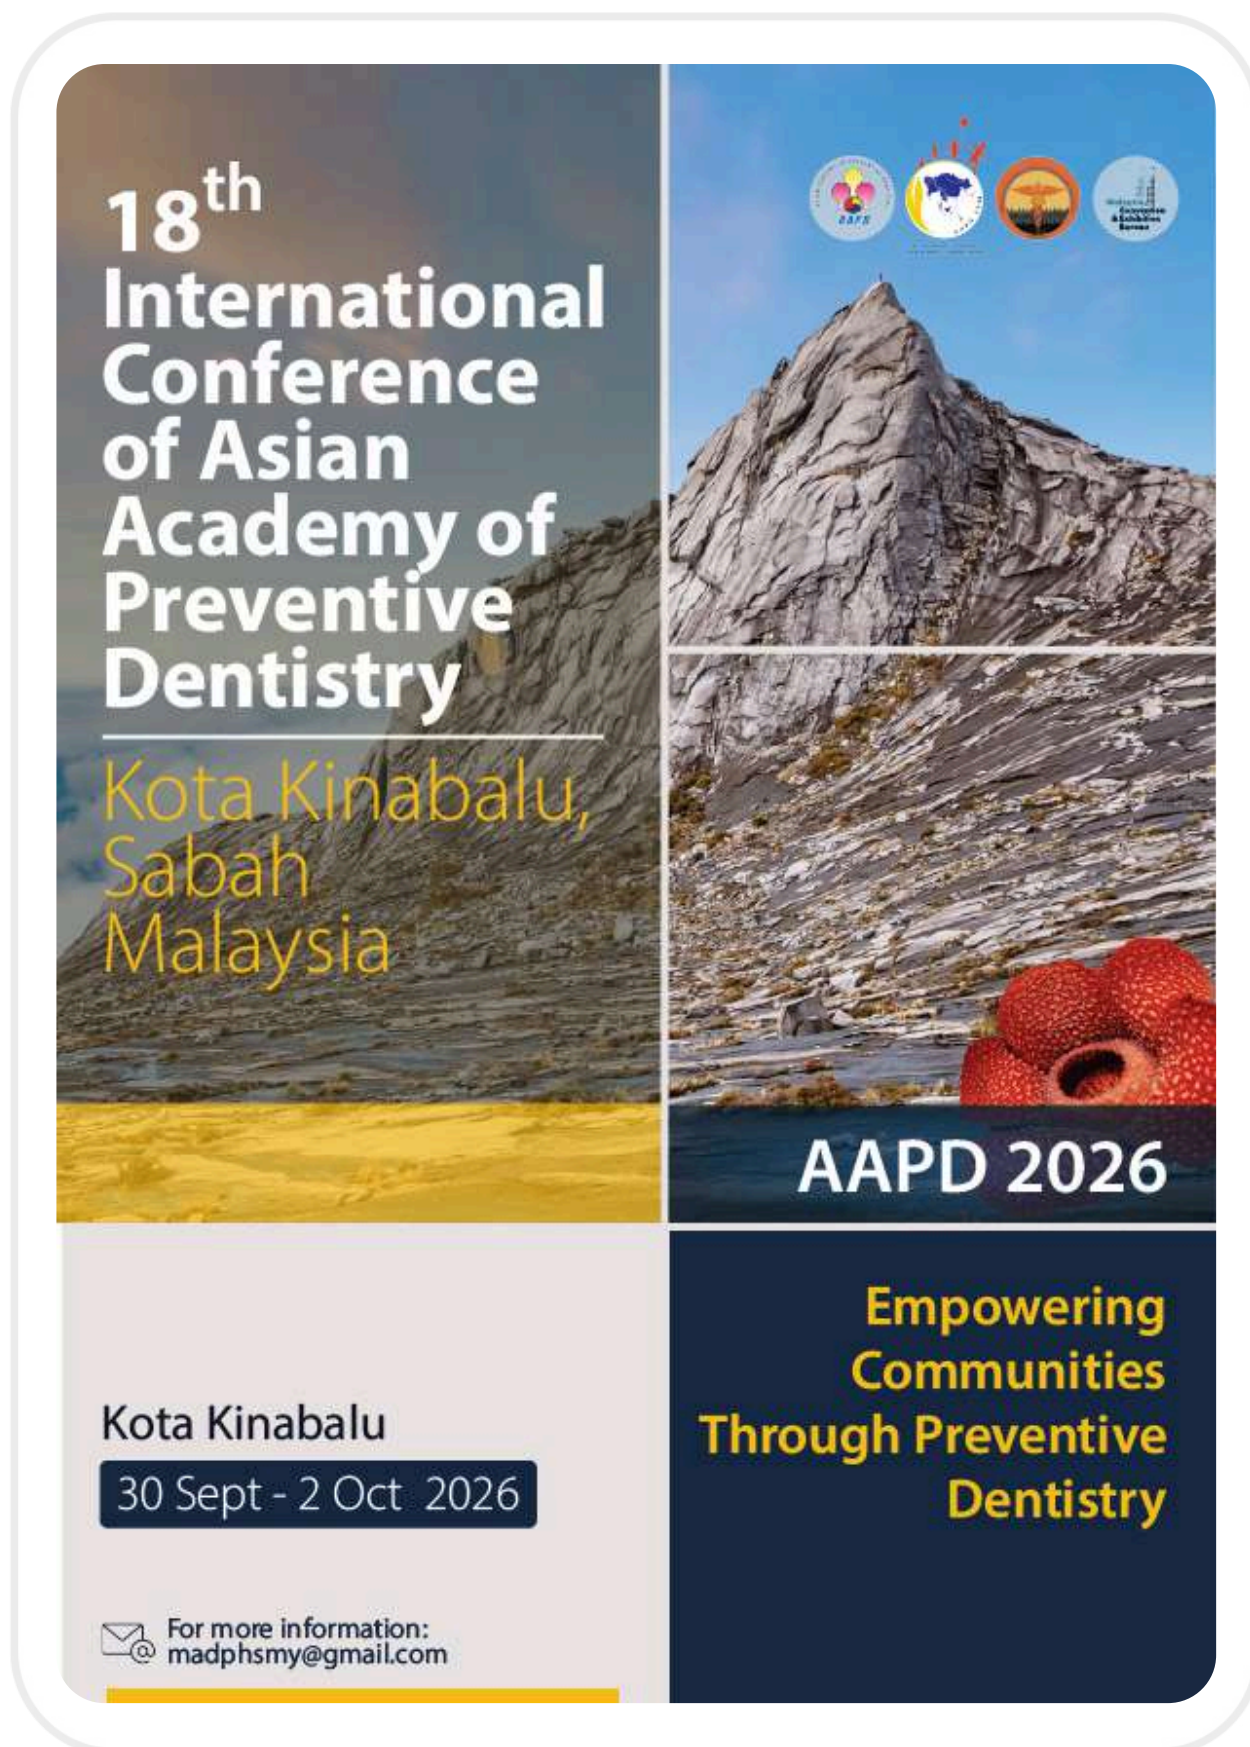

Professor Dr. Rahimah Abdul Kadir

President Asian Academy of Preventive Dentistry (AAPD) 2025-2027
Chairperson, Organising Committee, 18th ICAAPD

POSTER

AAPD 2026 Conference Poster

The poster is a vertical rectangular graphic with rounded corners, divided into several sections. The top left section features a background image of a rocky mountain peak (Mount Kinabalu) with a yellow sunset or sunrise at the bottom. Overlaid on this is the text '18th International Conference of Asian Academy of Preventive Dentistry' in white, and 'Kota Kinabalu, Sabah Malaysia' in yellow. The top right section shows a similar mountain peak image with four circular logos at the top: AAPD, WHO, and two others. The bottom right section has a dark blue background with the text 'AAPD 2026' in white, and 'Empowering Communities Through Preventive Dentistry' in yellow. The bottom left section has a light grey background with the text 'Kota Kinabalu' and '30 Sept - 2 Oct 2026' in white, and an email icon and address 'For more information: madphsmy@gmail.com' in white.

DELEGATE GUIDE

Conference at a Glance

Hilton Kota Kinabalu · Kota Kinabalu, Sabah, Malaysia

30 SEPTEMBER · WEDNESDAY

Pre-conference

Four workshops, AAPD Board of Executives Meeting, oral presentations, and invitation-only welcome reception.

1 OCTOBER · THURSDAY

Main conference · Day 1

Plenary 1, AAPD Distinguished Forum, opening ceremony, keynote speech, Symposia 1–2, oral and poster presentations, and gala dinner.

2 OCTOBER · FRIDAY

Main conference · Day 2

Oral and poster presentations, Symposia 3–6, Plenaries 2–3, closing ceremony and awards.

POSTERS & EXHIBITION

Level 1 · Foyer

E-posters will be available through the digital display throughout the conference. Scheduled poster sessions are shown in the daily programme.

Useful information

Registration is scheduled from 08:00–16:00 on 30 September and 1 October, and from 08:00–12:00 on 2 October. The master programme specifies Level 1 for registration on the first two days.

The NaF varnish workshop and AAPD Board of Executives Meeting are closed sessions. The welcome reception is by invitation only.

Programme times and room allocations follow the supplied master schedule updated 31 August 2026. The programme remains subject to organiser updates.

Grand Ballroom

Beyond the Dental Chair: The Unsung Heroes in Mass Disaster Management

Speaker: Brigadier General (Dr) Hazudin Hassan

Moderator: Associate Professor Dr. Haslina Rani

16:00–16:45

Closing & Award Giving Ceremony

Grand Ballroom

16:45–17:00

Tea Break & Adjournment

Thank you for joining the 18th ICAAPD 2026.

*Refer to the presentation schedule for presenter line-up & timing; E-posters are displayed via digital display at the Level 1 Foyer throughout the conference.

PRE-CONFERENCE WORKSHOP

Oral Health for Older People

30 September · 08:30–14:00 · Workshop 1

Optimal Oral Health for Older People — A Common Protocol for Oral Health Survey of the Aged Population in Asia

LEAD FACILITATOR

Professor Dr. Hiroshi Ogawa

Professor, Division of Preventive Dentistry, Graduate School of Medical and Dental Sciences, Niigata University, Japan;
Director, WHO Collaborating Centre for Translation of Oral Health Science

As Asia's population ages, one question matters more than ever: what does optimal oral health look like for older people, and how do we help them achieve it? Japan, one of the world's most rapidly ageing societies, has spent decades building deep expertise and hands-on experience in this exact challenge, and this workshop brings that expertise directly to you. Led by leading Japanese specialists, the session combines current science with hands-on, practical skills you can use straight away. You will start with a clear framework for optimal oral health in ageing, then move into practical approaches for assessing and managing oral function, including chewing, swallowing, saliva and other key parameters in older adults. See real regional data as findings from a cross-Asia survey of oral functional status are presented, giving you a comparative view of practice and gaps across the region. The highlight of the day is the Common Protocol for Oral Health Survey for the Aged Population, built on Japan's pioneering experience in geriatric oral health and designed to make oral function data comparable across Asian countries, which you will get to try out yourself in a live, hands-on demonstration. You will also hear a Japanese industry perspective on ongoing initiatives supporting oral health care for older people. By the end of the workshop, you will know how to design and run your own data collection using the common protocol, whether for research or everyday clinical work, and you will join a growing regional network committed to sharing outcomes and driving future collaboration. Whether you are a dental professional, researcher or policymaker working with ageing populations, this interactive workshop offers Japan's science, tools and experience to help you make a real difference. Open to all delegates — register early to secure your seat.

Attendance: open. Dental professionals, researchers and policymakers working with ageing populations.

PRE-CONFERENCE WORKSHOP

Oral Health for Older People

Detailed workshop agenda

08:30–08:45	Introduction What is optimal oral health for older people to achieve healthy aging? Professor Dr. Hiroshi Ogawa
08:45–09:30	Assessment and Management of Oral Function in the Aging Population Professor Dr. Masanori Iwasaki
09:30–10:00	Questionnaire survey of oral functional status in Asia Dr. Takashi Hoshino
10:00–10:30	Common protocol for oral health survey for aged population Professor Dr. Masanori Iwasaki & Professor Dr. Hiroshi Ogawa
10:30–12:00	Demonstration of oral functional assessment All
12:00–13:00	Lion's initiatives in the Field of Oral Health Care Dr. Naho Suzuki, Dr Chiyoko Uchiyama & Dr. Satoshi Tomeoka
13:00–13:30	Design of data collection (How to use common protocol) in research and clinical work All
13:30–14:00	Future action: how to collaborate and share the outcomes and wrap up All

PRE-CONFERENCE WORKSHOP

Oral Health Literacy

30 September · 08:30–14:00 · Workshop 2

Leveraging Oral Health Literacy to Advance Oral Health Promotion and Disease Prevention

LEAD FACILITATOR

Associate Professor Dr. Wong Mun Loke

Vice Dean (Education) and Associate Provost (Integrated Education); Faculty of Dentistry, National University of Singapore

Information about oral health has never been more available, so why do dental caries and periodontal disease remain the two most common conditions affecting people everywhere? The answer lies beyond health education alone, in oral health literacy: how well people can access, understand, appraise and apply health information in their everyday lives. This engaging workshop invites you to rethink oral health promotion through the lens of health literacy, moving beyond simply handing out preventive advice to genuinely empowering individuals and communities to make informed choices about their oral health. You will explore the real barriers to, and drivers of, prevention at both the population and individual level, and gain a deeper understanding of what oral health literacy really means, why it matters, and how it can be strengthened in diverse communities. Through a mix of engaging presentations and lively interactive group discussions, you will leave with practical strategies to enhance oral health literacy in your own community, clinic or research setting, and with tools to measure progress along the way. Whether you are a clinician, educator, public health practitioner or researcher, this workshop offers fresh, practical thinking on one of the most powerful levers we have for preventing oral disease at scale. Don't miss this opportunity to learn directly from an international expert in dental education and oral health promotion, and to connect with fellow delegates who share a passion for building healthier, more informed communities. Seats are limited — register early to join us for this open, interactive pre-conference workshop.

Attendance: open. Clinicians, educators, public health practitioners and researchers.

PRE-CONFERENCE WORKSHOP

Smoking & Vaping Cessation

30 September · 08:30–14:00 · Workshop 3

Smoking & Vaping Cessation

FACILITATOR

Professor Dr. Chris Bullen

Professor of Public Health; Head, Department of General Practice and Primary Care; Director, Centre for Translational Health Research, School of Population Health, Faculty of Medical and Health Sciences, University of Auckland, New Zealand

FACILITATOR

Dr. Amer Siddiq Amer Nordin

Associate Professor in Psychiatry & Consultant Psychiatrist, Universiti Malaya; Head, Nicotine Addiction Research Group, University Malaya Centre of Addiction Sciences (UMCAS), Malaysia

Tobacco kills more than 8 million people every year, and the rise of vaping is reshaping the nicotine landscape faster than most clinicians can keep up. Are you ready to help your patients navigate it? This hands-on workshop equips healthcare professionals with practical, evidence-based tools to tackle tobacco and nicotine dependence in everyday clinical practice, from assessing nicotine dependence, and applying behavioural counselling and motivational interviewing, to selecting the right pharmacotherapy and managing relapse in patients who smoke or vape. Beyond cigarettes, you will also get up to speed on the fast-moving evidence around vaping, including its role in harm reduction, strategies for vaping cessation, how to support patients who use both cigarettes and vapes, and how to separate fact from common misconceptions. Drawing on international guidelines and real-world implementation experience in Malaysia, this workshop is designed for frontline healthcare professionals, including dental practitioners, who want to build genuine confidence in supporting patients to quit. Expect concise, practical lectures, real case discussions, live demonstrations and small-group exercises that let you practise what you learn, not just hear about it. By the end of the session, you will walk away with tools you can use in your very next patient consultation to support smoking cessation and address the growing challenges of vaping and dual use. Whether tobacco control is already part of your daily practice or a new frontier for you, this workshop will sharpen your skills and your confidence. Spaces are limited — register early to secure your place at this open, interactive pre-conference workshop.

Attendance: open. Frontline healthcare professionals, including dental practitioners.

Use of NaF Varnish in School-Based Programs in Asia is a closed, invitation-only workshop bringing together a select panel of international experts from across Asia to advance regional collaboration on school-based fluoride varnish (FV) programmes for children. Dental caries remains one of the most prevalent non-communicable diseases affecting children across the region, and school-based FV application is recognised as a proven, cost-effective strategy for prevention at population scale, yet its implementation still varies widely from country to country. Over a focused morning session, the invited expert panel will review the latest national and regional dental caries prevalence data for five- and twelve-year-old children, alongside existing school-based oral health programmes in their respective countries and will critically appraise a systematic review on school-based FV application to strengthen it as a shared regional evidence base. Building on this evidence, the panel will work towards regional consensus recommendations to guide the implementation of school-based fluoride varnish programmes across Asia, accounting for differences in population needs, workforce capacity and health system resources. The workshop will also lay the groundwork for at least two post-workshop academic publications arising from the panel's discussions. As this session is reserved for invited experts only, it is not open for general registration. We look forward to sharing the key outcomes and consensus recommendations from this important regional initiative with the wider dental and public health community following the conference.

This workshop is by invitation only and is not open for public registration.

AAPD DISTINGUISHED FORUM

Integrating Oral Health into Universal Health Coverage in Asia: Strategic Initiatives and Challenges

1 October · 09:15–10:30 · Grand Ballroom

The AAPD Distinguished Forum brings together senior voices from global, national and academic perspectives to examine how oral health can be more fully integrated into Universal Health Coverage (UHC) across Asia. As the WHO Global Oral Health Action Plan 2023–2030 calls for essential oral care to be embedded within primary health care, this forum considers what that means in practice: the strategic initiatives already under way at global and country level, the structural and resourcing challenges that stand in the way, and the opportunities for the region to accelerate progress together. Panellists bring perspectives from the World Health Organization, from a national oral health authority in Malaysia, and from a WHO Collaborating Centre for oral health research and translation in Japan, offering a rounded view of what integrating oral health into UHC requires — policy commitment, health-system strengthening, and sustained regional collaboration.

Moderator

Professor Emeritus Dr. Prathip Phantumvanit

Thammasat University, Faculty of Dentistry, Thailand — 3rd President of AAPD

Professor Emeritus Dr. Prathip Phantumvanit, Thammasat University, Faculty of Dentistry, Thailand, served as the 3rd President of the Asian Academy of Preventive Dentistry (AAPD), following the founding presidency from Japan and the presidency from Korea. He was Chairman of the Organizing Committee of the 3rd ICAAPD in Chiangrai, Thailand, in 1999, and remained a member of the AAPD Executive Committee until the 13th ICAAPD in Khon Kaen, Thailand, in 2018. He has participated in every ICAAPD from the 1st through the 14th, and was the last speaker at the 14th ICAAPD in Korea (attended online). Recalling the history of AAPD in his own words, he notes that it started as a group of academic dentists working and researching on fluoride for caries prevention some 30 years ago, which led to the advancement of preventive dentistry across the region in every field — community, school-based, individual, clinical and laboratory preventive dentistry — moving beyond fluoride to oral health promotion more broadly.

AAPD DISTINGUISHED FORUM

Meet the Panellists

1 October · 09:15–10:30 · Grand Ballroom

Dr. Benoit Varenne

Technical Lead for Oral Health, World Health Organization (WHO), Geneva, Switzerland

Dr. Benoit Varenne is Technical Lead for Oral Health at the World Health Organization (WHO), Geneva, Switzerland. An internationally recognised public health dentist, he leads WHO's global oral health programme and supports Member States in integrating oral health into Universal Health Coverage (UHC) and Primary Health Care (PHC). He provided technical leadership for the development of the WHO Global Strategy on Oral Health and the Global Oral Health Action Plan 2023–2030, and continues to guide their implementation, working with governments, international organisations and academic institutions to advance global oral health. He previously served as Regional Adviser on Oral Health at the WHO Regional Office for Africa (WHO AFRO), where he supported national oral health policy development and strengthened regional capacity for disease prevention. His work bridges policy, health systems strengthening, and the global noncommunicable disease (NCD) agenda.

Dr. Fauziah Ahmad

Deputy Director General of Health (Oral Health), Ministry of Health Malaysia

Dr. Fauziah Ahmad is Deputy Director General of Health (Oral Health) at the Ministry of Health Malaysia. A Senior Consultant Dental Public Health Specialist, she holds a Bachelor of Dental Surgery and a Master of Public Health (Oral Health) from the University of Malaya, and leads the planning, implementation, monitoring and evaluation of Malaysia's national oral healthcare programmes. She was instrumental in developing Malaysia's National Oral Health Policy and the National Oral Health Strategic Plan 2022–2030, and continues to guide their implementation, working with government and non-government agencies to strengthen equitable access to oral healthcare. She also serves as Registrar of the Malaysian Dental Council, overseeing regulatory standards for the dental profession. Her work bridges national policy, health systems strengthening, and Malaysia's alignment with the WHO Global Oral Health Action Plan 2023–2030.

Professor Dr. Hiroshi Ogawa

Niigata University; Director, WHO Collaborating Centre for Translation of Oral Health Science (JPN-75), Japan

Dr. Hiroshi Ogawa is Professor in the Division of Preventive Dentistry at Niigata University's Graduate School of Medical and Dental Sciences, Japan, and Director of the WHO Collaborating Centre for Translation of Oral Health Science (JPN-75). He holds a bachelor's degree in dentistry from Nihon University, a master's in Public Health Dentistry from the University of Sydney, and a doctorate in Preventive Dentistry from Niigata University. He has held various positions at the World Health Organization since 2003, including as a dental officer with the WHO Oral Health Programme in Geneva from 2014 to 2017, and now serves on the WHO Clinical Consortium on Healthy Aging and the FDI World Dental Federation Council. His research examines the links between oral and systemic noncommunicable diseases and the shared risk factor approach. A longstanding contributor to AAPD, he is nominated to chair the AAPD meeting in Japan in 2028.

Moderator: Professor Dr Rahimah Abdul Kadir

**Professor Dr. Shuguo Zheng**

Peking University School of Stomatology, China

BIOGRAPHY

Dr. Shuguo Zheng is Professor and Chairman, Department of Preventive Dentistry, Peking University School of Stomatology (PKUSS). He graduated from PKUSS with DMD (1992) and Ph.D. & M.D. (1996). He is the President-elect of the Asian Academy of Preventive Dentistry (AAPD) and the director of the World Health Organization Collaborating Center (WHOCC CHN-26) for the Research and Training in Preventive Dentistry in China. He is the President-elect of the Chinese Society of Preventive Dentistry, Chinese Stomatological Association. He is also the chief representative of the Chief Dental Officer of China. His main research areas are: dental public health study in China, oral biomarker study in oral and systemic diseases, molecular biological study for dental developmental abnormality. He received over 23 national research grants and published over 100 papers as the first author or corresponding author in journals such as *Protein & Cell* and the *Journal of Dental Research*. He has won one international and three national science and technology awards.

ABSTRACT

Oral Health for All: From Primary Care to Universal Coverage in China and Asia

Globally, oral diseases affect 3.5 billion people, with dental caries remaining the most prevalent non-communicable disease (NCD). The WHO Western Pacific Region bears a disproportionate burden with high caries prevalence in young populations concentrated in underserved regions. Recognizing that "No health without oral health," the WHO 2023–2030 Global Oral Health Strategy and Action Plan strongly recommends the integration of essential oral care into primary health care (PHC) to increase universal health coverage, emphasizing task-shifting to train more community dental workforce and prioritizing cost-effective interventions. China has responded to these with a series of policy frameworks, mandating oral departments in township health centers, standardizing basic oral disease codes, and incorporating children's oral services into family doctor contracts. However, disparities persist: the national dentist-to-population ratio masks severe shortages at the grassroots — western rural areas report much lower ratios. Early treatment-seeking and service utilization in communities remains low. For Asia-Pacific nations, China's experience underscores three imperatives: embedding oral health within PHC infrastructure rather than siloed specialist care; empowering nurses and community health workers through competency-based training; and addressing sugar as a shared risk factor across NCDs. Critically, strengthening China's grassroots oral health system would effectively cover 60–80% of the WHO regional disease burden, given China's demographic weight in the Western Pacific. China bears profound responsibility and seeks mutual learning with regional partners to advance oral health equity through collaborative PHC innovation.

PLENARY 1

1 October · 08:30–09:15 · Grand Ballroom

Moderator: Associate Professor Dr Melissa Adiatman

**Professor Dr. Xin Xu**

West China School of Stomatology, Sichuan University, China

BIOGRAPHY

Dr. Xin Xu is Professor and Director of the Department of Preventive Dentistry, West China Hospital of Stomatology, Sichuan University. He has long been engaged in basic research and clinical practice in conservative dentistry and endodontics, having published over 100 papers in journals including Journal of Clinical Oncology, Nature Communications, The ISME Journal and Journal of Dental Research. His representative achievements have been included in the "Important Medical Advances of 2021 in China" by the Chinese Academy of Medical Sciences. He has received one National Scientific and Technological Progress Award and one Provincial Scientific and Technological Progress Award in China, and has been listed as a Highly Cited Chinese Scholar in Dentistry (Elsevier), among the top 2% of global scientists for consecutive years, and recognised as one of the top 100 scholars in the field of oral medicine for academic influence in China. He serves as an editorial board member for the national undergraduate textbook "Operative Dentistry and Endodontics" (5th edition) and the Journal of Dental Research, and is a Fellow of the International College of Dentists.

ABSTRACT

From Bench to Bedside: Innovative Approaches to Radiation-Induced Oral Mucositis and Taste Dysfunction

Radiotherapy (RT) is a cornerstone treatment for head and neck cancer (HNC), but acute oral complications such as oral mucositis (OM), xerostomia, taste dysfunction, and infections remain common. OM is the most frequent acute toxicity, with 50–70% of patients developing severe OM (WHO grade 3–4), leading to pain, impaired eating, swallowing, and speaking, reduced treatment tolerance, decreased quality of life (QoL), and treatment interruptions. Patients also frequently experience hypogeusia, ageusia, and dysgeusia, which further increase the risk of malnutrition and psychological distress. Although MASCC/ISOO has issued recommendations for radiation-induced OM, their efficacy and safety require further validation. Our group has long focused on the shared mechanisms and clinical management of radiation-induced oral mucositis (RIOM) and taste dysfunction. We identified a critical role of oral microbial dysbiosis in RIOM and showed in a clinical trial that oral probiotics, particularly *Streptococcus salivarius* K12, can delay onset and shorten the duration of severe OM in HNC patients receiving RT, likely via modulation of the oral microbiota. We also demonstrated that Wnt/ β -catenin signaling is essential for the repair and regeneration of oral mucosa and taste buds, and that LiCl can promote recovery from RIOM and dysgeusia; these findings were highlighted by JDR on the IADR official website. To advance clinical translation, we have initiated two registered clinical trials evaluating the efficacy and safety of lithium-containing mouthrinse and hydrogel for the prevention and treatment of RIOM and taste dysfunction. Collectively, our work proposes promising, mechanism-based strategies for improving the management of radiation-induced oral complications, particularly OM and taste dysfunction, with the goal of enhancing QoL and optimizing oncologic outcomes in HNC patients.

**Associate Professor Dr. Cheah Chia Wei**

Universiti Malaya, Malaysia

BIOGRAPHY

Dr. Cheah Chia Wei graduated from the University of Malaya with a Bachelor of Dental Surgery. She worked as a dental officer in the Ministry of Health before joining the Faculty of Dentistry. There, she underwent specialist training in Periodontology and became a lecturer, teaching general dentists and specialists in Periodontology. She has a PhD related to oral microbial profiling using 16S rRNA gene sequencing in relation to the inflammatory status of rheumatoid arthritis subjects with periodontitis. Cheah Chia Wei was the head of discipline, postgraduate coordinator for the Master of Oral Sciences (Periodontology) programme, and also led the Clinical Craniofacial Dental Research Group in the Faculty of Dentistry, Universiti Malaya. She is currently the treasurer for The Malaysian Society of Oral Microbiologists and Oral Immunologists. Her research interests include alveolar ridge preservation, periodontal/bone regenerative material for implantology, probiotics for management of periodontitis and oral microbiology influencing periodontal health and systemic health.

ABSTRACT

High Molecular Weight Hyaluronic Acid in Dentistry: Evidence-Based Applications for Oral Soft Tissue Healing and Regeneration

High molecular weight hyaluronic acid (HMW-HA) has gained increasing attention in dentistry due to its anti-inflammatory and wound-healing properties. This lecture will provide an evidence-based overview of the biological mechanisms and clinical applications of HMW-HA in promoting oral soft tissue healing and regeneration. Current literature on its use in periodontal therapy, oral surgery, implant dentistry and post-operative care will be discussed. Emphasis will be placed on clinical effectiveness, indications, and delivery methods in contemporary dental practice. Participants will gain practical insights into integrating HMW-HA into daily patient management for improved healing outcomes.

**Brigadier General (Dr) Hazudin Hassan**

Malaysian Armed Forces Health Services

BIOGRAPHY

Brigadier General (Dr) Hazudin Hassan earned his Bachelor of Dental Surgery (1995) and Doctorate in Clinical Dentistry (2005) from the University of Adelaide, Australia, and is a Fellow of the Royal Australasian College of Dental Surgeons. He joined the Malaysian Armed Forces Health Services in 1997 and has served 29 years in uniform, including deployment during the 2005 United Nations peacekeeping mission in Western Sahara and coordinating hundreds of rural dental outreach programmes during his posting in Sarawak. He served as Deputy Commander of the Greater Klang Valley Special Task Force for COVID-19. He is currently Head of the Dental and Pathology Departments at 94 Armed Forces Hospital, Melaka, and is serving his second term as a Council Member of the Malaysian Dental Council.

ABSTRACT

Beyond the Dental Chair: The Unsung Heroes in Mass Disaster Management

The Malaysian Armed Forces Dental Services (MAFDS) is part of a military healthcare system known as the Malaysian Armed Forces Health Services (MAFHS). MAFHS's mission is centered on maintaining the combat readiness of the MAF by providing optimal health services and support. Apart from its core function, MAFHS remains committed to contributing towards national resilience through its role in the Whole-of-Government and Whole-of-Society (WOGOS) approaches, especially in crises, humanitarian and disaster relief (HADR) missions, and civil-military cooperation. Field and mobile capabilities are a crucial component of MAFHS, with dedicated medical battalions ready to be rapidly deployed to conflict zones and HADR missions. These battalions are trained to set up mobile field hospitals to provide immediate care, including resuscitative treatment, advanced trauma surgery, and other health services. The distinctive ability to be deployed at a moment's notice is the main thrust of MAFHS's involvement in various international missions. It has participated in multiple United Nations (UN) operations in conflict areas such as Namibia, Bosnia, Cambodia, East Timor, Western Sahara and Lebanon. During these peacekeeping missions, the medical and dental elements also provide care for displaced populations and refugees. In HADR, MAFHS has served globally in disaster areas such as during the tsunami in Aceh, earthquakes in Pakistan, Padang, Türkiye and Myanmar, post-conflict support in Afghanistan and typhoon relief in the Philippines. Domestically, MAFHS has been deployed to assist local authorities during landslides, floods and the COVID-19 pandemic. The MAFHS forensic odontologists team has been deployed to mass disaster areas aiding in disaster victim identification (DVI) during the MH17 tragedy, civilian and military aircraft crashes and the Lahad Datu incident. In executing its duty, the MAFHS receives full logistic support from the Malaysian Armed Forces: the Army provides security protection, land transport, engineers, and other services through its various Corps; the Air Force provides air transport and CASEVAC support; and the Navy provides maritime transport.

SYMPOSIUM 1

The New Nicotine Frontier: Tobacco, Vaping, Oral Health and the Evolving Risk Landscape

1 October · 13:30–15:00 · Grand Ballroom

Moderator: Dr Yuriko Harada

Associate Professor Dr. Amer Siddiq Amer Nordin

Universiti Malaya, Malaysia

BIOGRAPHY

Dr. Amer Siddiq Amer Nordin is an Associate Professor in Psychiatry and Consultant Psychiatrist at Universiti Malaya, where he leads the Nicotine Addiction Research Group (NARCC) at the University Malaya Centre of Addiction Sciences (UMCAS), focused on helping people quit smoking. His team developed SCOPE, one of four accredited smoking cessation provider training programmes in Malaysia, and GEMPAQ, a mobile app supporting quit-smoking efforts. He is Malaysia's lead for the International Tobacco Control Study (ITC), a 26-country tobacco policy research consortium, and has served on Ministry of Health and WHO technical working groups on tobacco control. He was part of the Parliamentary Select Committee that helped shape Malaysia's Tobacco Control Bill (passed 2023, enforced 2025), and his team plays a key role in the national Smoke Free Malaysia / mQuit initiative.

ABSTRACT

The Smoking–Vaping Epidemic: Trends, Dual Use and the New Public Health Risks

The introduction and presence of electronic nicotine delivery devices has transformed the tobacco epidemic, creating a complex landscape characterised by increasing vaping, persistent combustible tobacco use, and the emergence of dual-use behaviours. While cigarette smoking has declined in many populations, nicotine dependence remains prevalent as youth uptake of vaping, product diversification, and aggressive marketing continue to reshape patterns of use. Evidence from Malaysia and other low- and middle-income countries demonstrates that dual use is increasingly common, challenging assumptions that vaping is simply replacing smoking. Dual use is associated with sustained nicotine addiction, delayed smoking cessation, and continued exposure to toxicants from combustible tobacco. Among adolescents, early exposure to nicotine through vaping raises concerns regarding addiction, progression to combustible tobacco use, and long-term neurodevelopmental effects. At the population level, the coexistence of cigarettes, vaping products and emerging nicotine products complicates surveillance, regulation, clinical management and public health messaging. This presentation synthesises current epidemiological trends, implementation research, and tobacco control evidence to examine the evolving smoking–vaping epidemic, with particular emphasis on Malaysia and the broader regional context. It discusses the implications of dual use for healthcare systems, highlights gaps in prevention and cessation services, and explores evidence-based strategies integrating behavioural interventions, pharmacotherapy, regulatory approaches and health system strengthening. As the nicotine landscape continues to evolve, effective tobacco control must move beyond product-specific policies towards comprehensive nicotine dependence management that prioritises prevention, early intervention, cessation support and implementation of evidence-based public health strategies. This integrated approach is essential to reducing the future burden of nicotine addiction and tobacco-related disease.

SYMPOSIUM 1

The New Nicotine Frontier: Tobacco, Vaping, Oral Health and the Evolving Risk Landscape

1 October · 13:30–15:00 · Grand Ballroom

Moderator: Dr Yuriko Harada

Professor Dr. Chris Bullen

The University of Auckland, New Zealand

BIOGRAPHY

Dr. Chris Bullen is a public health physician and Professor of Public Health at the University of Auckland, New Zealand, where he directs the Centre for Translational Health Research. He has led numerous large pragmatic trials of smoking cessation interventions, contributed to three Cochrane reviews and successive New Zealand Smoking Cessation Guidelines, and published more than 300 peer-reviewed papers, most on smoking-related research. He is a past-President of the Society for Research on Nicotine & Tobacco, co-chairs the Health Coalition Aotearoa Smokefree Expert Advisory Group, and co-chairs the ASEAN Board on Smoking Cessation. He has collaborated with colleagues in Malaysia on smoking cessation research and health-worker training for over a decade.

ABSTRACT

Vapor Trails and Policy Walls: Dual Use and Regulatory Gaps

The rapid growth in e-cigarette use (vaping) in Malaysia and most other countries around the world over the past decade is an issue of public health concern. While smoking remains the greater public health challenge, vaping, often in conjunction with smoking ("dual use") and the health effects that arise, should not be downplayed. The impacts from vaping on individual and population health are what I refer to as 'vapor trails'; whereas 'policy walls' are the laws, regulations, enforcement and clinical care required to tackle the problem at multiple levels. In this presentation I will outline the epidemiological and clinical evidence of harm from vaping and especially dual use, and provide evidence in support of my contention that it is the misalignment between the vapor trails and policy walls that has led to the many gaps, asymmetries, incoherence, and barriers to support quitting. Oral health is often regarded as the 'canary in the coalmine' of emerging health issues, and vaping is no exception. Oral health professionals therefore have a vital role to play, not only in offering the best clinical care possible but also in bearing witness to the health impacts of vaping and smoking (the 'vapor trails') and advocating for the erection of effective 'policy walls' that will prevent harm and ensure evidence-based support is available for people to quit both smoking and vaping.

The New Nicotine Frontier: Tobacco, Vaping, Oral Health and the Evolving Risk Landscape

1 October · 13:30–15:00 · Grand Ballroom

Moderator: Dr Yuriko Harada

Dr. Muhammad Zulkefli Ramlay

Ministry of Health, Malaysia

BIOGRAPHY

Dr. Muhammad Zulkefli Ramlay is the Deputy Director and Head of the Oral Health Promotion Branch at the Oral Health Programme, Ministry of Health Malaysia. Gazetted as a Dental Public Health Specialist since 2016, he obtained his dental degree from the University of Malaya (UM) in 2005, and subsequently completed his Master's and doctoral degrees in Dental Public Health at Universiti Sains Malaysia (USM) in 2012 and 2015, respectively. He was part of the core team that planned and developed the Smoking Prevention, Screening, and Intervention Program for Schoolchildren (Program KOTAK) in 2015. In addition, he serves as the KOTAK Program Coordinator for three states (Pahang, Negeri Sembilan, and Selangor) and leads the national review team for the program's guidelines. He has also contributed significantly to the development of various other national-level guidelines for the ministry's dental services.

ABSTRACT

A Decade of the KOTAK Program: Strengthening Tobacco Control through School Dental Services in Malaysia (2016–2026)

Smoking remains a significant public health challenge, with initiation often occurring during adolescence. In alignment with the WHO Framework Convention on Tobacco Control (FCTC) and the National Strategic Plan for Tobacco Control 2015–2020, the Ministry of Health Malaysia launched a smoking prevention, screening, and intervention program for schoolchildren, namely the KOTAK Program (Kesihatan Oral Tanpa Amalan Merokok), in 2016. This initiative integrates tobacco screening and intervention into the existing School Dental Service, targeting students from Primary 1 to Secondary 5 (spanning an 11-year schooling period). Over the past decade, the program has evolved from a 28-school pilot to a nationwide implementation involving collaboration between the Ministry of Health and the Ministry of Education. The KOTAK framework encompasses three core components: integrated health education, smoking screening (via clinical oral signs or student self-disclosure), and behavioral interventions. As of 2025, the program has achieved a massive reach, screening over 4.7 million students across 7,875 primary schools and 2,520 secondary schools. While smoking prevalence remains low in primary schools (<0.1%), screenings in secondary schools consistently identify current smokers at rates of 1.92%–4.07%. Intervention outcomes indicate variable success, with quit rates reaching up to 10.5% in secondary school cohorts six months post-intervention. Despite its success, the program faces challenges such as intervention time constraints and the rising threat of e-cigarettes. Moving forward, the program aims to re-orient guidelines to include vaping, explore rapid cotinine testing, and strengthen collaboration with school counselors. A decade of KOTAK demonstrates that dental practitioners are vital frontline facilitators in the mission to achieve a tobacco-free generation by 2045.

SYMPOSIUM 2

Strengthening Public Health Impact through Education and Training

1 October · 13:30–15:00 · Vista 1 & 2

Moderator: Professor Dr Michelle Segarra

Professor Dr. Waranuch Pitiphat

Khon Kaen University, Thailand — President, SEAADE

BIOGRAPHY

Dr. Waranuch Pitiphat is an epidemiologist and Dental Public Health Specialist at Khon Kaen University, Thailand, where she previously served as Dean. She earned her DDS from Chulalongkorn University, a Master's in Primary Health Care Management from Mahidol University, and an MSc and ScD in Epidemiology from Harvard University, USA. Dr. Pitiphat currently serves as President of the South East Asia Association for Dental Education (SEAADE) and is a member of the Board of Directors of the DeRouen Center for Global Oral Health at the University of Washington, USA. She is a past president of both the Asian Academy of Preventive Dentistry (AAPD) and the Thai Society of Public Health Dentistry. She also directs the "Clinical and Public Health Research in Oral Health Training Program for Southeast Asia," a long-standing training initiative supported by the National Institutes of Health, USA. With over 100 peer-reviewed publications, Dr. Pitiphat has made significant contributions to the field and serves on the editorial boards of several leading dental journals, including the Journal of Dental Research, JDR Clinical & Translational Research, Oral Diseases, and Odontology. She has received numerous awards, including the Outstanding Government Official Award from the Office of the Prime Minister of Thailand.

ABSTRACT

Strengthening Public Health Impact through Education and Training: The SEAADE Perspective

The global oral health agenda is undergoing a major shift, guided by the WHO Global Oral Health Action Plan (2023–2030) and reaffirmed by the 2024 Bangkok Declaration. Translating these policy mandates into tangible population health outcomes requires a socially accountable workforce embedded within primary healthcare. As the regional authority on dental education, the South East Asia Association for Dental Education (SEAADE) plays a pivotal role in aligning regional training with these public health needs. This presentation outlines how SEAADE has revised regional core competencies for graduating dentists, providing a practical framework that member institutions can use for curriculum reform. Key strategies focus on transitioning from restorative-heavy models to preventive-centric competencies, integrating the Common Risk Factor Approach, and fostering interprofessional collaboration across the dental team. Shifting clinical training into primary care environments ensures students gain direct experience delivering equitable, community-focused care to underserved populations. Ultimately, strengthening public health impact begins in the university setting. By uniting global partnerships with international bodies like ADEA and ADEE with regional competency harmonization, SEAADE provides a framework to ensure that tomorrow's dental graduates are equipped not only as skilled clinicians, but as active public health leaders driving sustainable, preventive oral health across Asia.

BIOGRAPHY

Dr. Tammy Duangporn Duangthip is Professor and Chair of the Division of Dental Public Health at The Ohio State University College of Dentistry. She holds a Ph.D. and MSc in Dental Public Health from the University of Hong Kong, a Dr. med. dent. from the University of Bern, and a DDS from Chulalongkorn University in Thailand. She is a Fellow of both the Royal Australasian College of Dental Surgeons (FRACDS) and the Royal College of Dental Surgeons of Thailand (FRCDT) in Dental Public Health. Recognized among the Stanford/Elsevier Top 2% Scientists in 2025, Dr. Duangthip has authored more than 100 peer-reviewed publications and has a Scopus H-index of 32. Her research spans community dental care, caries management, and child oral health, with a strong focus on improving oral health equity. She serves as Specialty Chief Editor for *Frontiers in Dental Medicine* and as Associate Editor for the *International Dental Journal*, *BMC Oral Health*, and *Frontiers in Oral Health*. Dr. Duangthip is also a Past President of the IADR Pediatric Oral Health Research Group and the Society of Preventive Dentistry of Hong Kong.

ABSTRACT

Community-Based Dental Education: Lessons from the United States

Community-based dental education (CBDE) has become an important approach in dental training in the United States, aiming to prepare future dentists to address population oral health needs and improve access to care. By integrating education with real-world service settings, CBDE exposes students to diverse communities and strengthens their understanding of social determinants of oral health. This symposium presentation will discuss key lessons learned from CBDE models implemented in U.S. dental schools. The presentation will highlight how partnerships between academic institutions and community stakeholders create meaningful learning environments while expanding preventive oral health services for underserved populations. Examples from community-based dental programs will illustrate how CBDE enhances clinical competence, professional responsibility, and community engagement. In addition, the talk will address practical considerations for implementing CBDE, including curriculum integration, logistics, and sustainable community partnerships. Challenges such as resource limitations, and alignment with accreditation expectations will be explored. The session will also discuss opportunities and future research directions to strengthen CBDE globally as a pathway toward socially accountable dental education and improved oral health equity.

Professor Dr. Tuti Ningseh Mohd Dom

Universiti Kebangsaan Malaysia

BIOGRAPHY

Dr. Tuti Ningseh Mohd Dom is is Professor of Dental Public Health and Dean of the Faculty of Dentistry at Universiti Kebangsaan Malaysia (UKM) and a specialist in Dental Public Health. She contributes to national dental curricula and accreditation standards and plays an advisory role to the Ministry of Health Malaysia (MOH) and the Academy of Sciences Malaysia (ASM) on population oral health matters. She leads multidisciplinary teams and professional networks to strengthen oral health literacy and improve access for vulnerable groups, including low-income families, people with disabilities, older adults, and individuals with chronic conditions. She also serves as a grant reviewer for the Ministry of Higher Education. Dr Tuti is Past Chairperson of the Malaysian Dental Deans Council and is a member of the Malaysian Dental Council.

ABSTRACT

Building Public Health Leaders through DPH Specialist Training: The Malaysian Experience

Dental Public Health (DPH) specialist training should contribute not only to specialist qualification, but also to the development of leaders who can strengthen oral health systems. In Malaysia, DPH specialist training follows a 1+3 pathway comprising a one-year Master in Dental Public Health followed by a three-year Doctorate in Dental Public Health within the nationally recognised postgraduate dental specialty framework. This presentation reflects on the Malaysian experience and considers how DPH specialist training can be positioned as a pathway for leadership development in policy, services, research, and education. The Master phase provides grounding in public health principles, epidemiology, and research methods, while the doctoral phase strengthens more advanced competencies in programme planning, evaluation, scholarship, and service leadership. The Malaysian experience suggests that the public health value of DPH specialist training lies not only in producing specialists, but also in preparing professionals who can respond to priorities such as inequity, population ageing, and stronger health system integration.

SYMPOSIUM 3

Caries Prevention in Children and Adolescents: Innovations and Policy Implications

2 October • 10:15–11:45 • Grand Ballroom

Moderator: Professor Dr Shuguo Zheng

Professor Dr. Zamros Yuzadi Mohd Yusof

Universiti Malaya, Malaysia

BIOGRAPHY

Dr. Zamros Yuzadi Mohd Yusof is Professor of Dental Public Health at the Faculty of Dentistry, Universiti Malaya. He holds a Bachelor of Dental Surgery from Queen's University Belfast, a master's degree from University College London, and a Diploma in Dental Public Health from the Royal College of Surgeons of England, and completed his PhD at Universiti Malaya after eight years with the NHS UK. His research spans the social determinants of oral health, the burden of oral disease, and the impact of community interventions and policy on oral health and well-being. He has spent much of his career working with schools and communities to prevent caries and promote oral health among children and adolescents, collaborating closely with the Ministry of Health's Oral Health Programme. His work includes strengthening preschool and rural school oral health programmes and developing a smartphone app for secondary schoolchildren. He is active in postgraduate supervision and publishes widely in peer-reviewed journals.

ABSTRACT

Advancing Oral Health among Adolescents: Impact of the MySmile® App in Community School Settings

Children's oral health remains a fundamental aspect of overall well-being, affecting not only physical health but also psychosocial health, learning, quality of life, and future success. Over the past twenty years, evidence-based research has provided valuable insights into how early prevention, behavioural modification, and community engagement can help reduce caries and gum disease, and improve children's oral health. In this lecture, three evidence-based interventions for preschool, primary school, and adolescent populations will be briefly mentioned, followed by detailed presentation of the development and evaluation of The MySmile® app for secondary schoolchildren. The app was developed using a user-centred approach and co-designed with input from adolescents to complement the School Dental Service (SDS). We evaluated its effectiveness through a cluster-randomised controlled trial involving secondary schoolchildren in Perak, with follow-ups at 4 and 12 weeks. The findings indicate that co-designed digital behavioural interventions can improve adolescents' preventive practices, oral hygiene, gum health, and caries-prevention efforts at the population level. Policy implications for scaling digital health within national programmes will be highlighted.

SYMPOSIUM 3

Caries Prevention in Children and Adolescents: Innovations and Policy Implications

2 October • 10:15–11:45 • Grand Ballroom

Moderator: Professor Dr Shuguo Zheng

Dr. Flora Chan Wai Ling

Society of Preventive Dentistry of Hong Kong

BIOGRAPHY

Dr. Flora Chan is a private dental practitioner in Hong Kong and Chief Executive Officer of an NGO providing special care dentistry services. She holds a Bachelor of Dental Surgery from the University of Hong Kong, a Master of Science in Community Dentistry, and a PhD from HKU's Department of Applied Oral Sciences and Community Dental Care, and is a Higher Trainee in Community Dentistry with the College of Dental Surgeons of Hong Kong. She has served as a Councillor of the Hong Kong Dental Association since 2019, chairing its Oral Health Education and Service Committee and its Women Dentists Committee, and is President of the Hong Kong Society of Preventive Dentistry. She previously led the establishment of a new dental hygienist course at the Vocational Training Council. Dr Chan also sits on the expert panel of the Hong Kong Primary Care Reference Framework and the Oral Disease Commission of the Asia Pacific Dental Federation, contributing regionally to community and preventive dentistry.

ABSTRACT

From Research to Routine: The Evolution of Outreach Dental Care for Caries Prevention in Hong Kong Preschool Children and the Transition to a Government-Integrated Programme

According to Hong Kong's 2021 territory-wide Oral Health Survey, caries prevalence among 5-year-olds was 41.6%, down from 55% (2011) and 60% (2001) — attributable to government policies including water fluoridation, kindergarten oral health education, and the School Dental Care Service, alongside outreach programmes using Silver Diamine Fluoride (SDF) to arrest Early Childhood Caries (ECC). Beginning as a small university research project funded by government grants in 2008, the outreach service expanded to 50 kindergartens (2010–2013) then 100 (2013–2016) via competitive research funding and industry support, becoming territory-wide in 2019 when the Hong Kong Jockey Club Charities Trust funded the Jockey Club Children Oral Health Project (JCCOHP), extending coverage to over 900 kindergartens. Beyond screening and intervention, it incorporates oral health education for long-term reductions in caries prevalence. Having demonstrated its effectiveness, the JCCOHP concluded at the end of the 2025–2026 school year; the Department of Health then launched the Outreach Oral Health Programme for Pre-school Children (OOHP) in September 2026, adopting the same delivery model — transitioning outreach dental services and oral health education into a recurrent government measure, overseen by the Department of Health and delivered by a panel of NGOs each operating at least one dental clinic. The presenter has been part of this journey as an outreach dentist, a researcher on SDF's effectiveness in managing ECC, CEO of an OOHP-participating NGO, and President of the Society of Preventive Dentistry of Hong Kong. Hong Kong's experience shows how clinical evidence and philanthropic investment can drive lasting policy change, embedding preventive preschool dental care into the public health system as a model for sustainable, community-based caries prevention. Next steps, emerging challenges, and new opportunities — including for children with special needs — will also be discussed.

SYMPOSIUM 3

Caries Prevention in Children and Adolescents: Innovations and Policy Implications

2 October • 10:15–11:45 • Grand Ballroom

Moderator: Professor Dr Shuguo Zheng

Dr. Irene Adyatmaka

Christian Maranatha University, Indonesia

BIOGRAPHY

Dr. Irene Adyatmaka, DDS, PhD, is a public health dentist and preventive dentistry expert with an international profile in oral health leadership. She is Director of the Global Oral Health Interest Group at the Consortium of Universities for Global Health (CUGH), Secretary for International Affairs of the Indonesian Dental Association (PB PDGI), and Senior Researcher at Universitas Indonesia. Her contributions to preventive dentistry include developing Dental Immunisation, a preventive oral healthcare model granted Intellectual Property Rights, and the Irene Donut Caries Risk Simulator, an evidence-based caries-risk assessment tool for preschool children. Her doctoral research on school-based caries prevention was adopted as national oral health policy by Indonesia's Ministry of Health, and she has been an invited speaker at international forums including Harvard University, King's College London, and IADR.

ABSTRACT

The Next Challenge in Caries Prevention: From Evidence to Implementation — Operationalizing School-Based Caries Prevention in Indonesia

Over the past decades, substantial progress has been made in identifying effective strategies for preventing dental caries in children and adolescents. Many countries have translated this evidence into national policies and school oral health programmes. However, successful implementation at scale remains a major challenge. Using Indonesia as a case study, this presentation explores the transition from evidence and policy to routine implementation of school-based caries prevention. Indonesia has established national policies supporting preventive oral health in schools, yet translating policy into consistent daily practice across diverse settings requires more than clinical evidence alone. The presentation will discuss key implementation challenges, including workforce readiness, stakeholder engagement, programme standardization, monitoring, and sustainability. It will also share practical lessons on how preventive interventions can be integrated into existing school health systems while remaining adaptable to local contexts. The future of caries prevention depends not only on discovering effective interventions but also on implementing them consistently, sustainably, and at scale. Indonesia's experience highlights the importance of implementation science as the next frontier in preventive dentistry and offers practical insights that may be applicable to other countries in the Asia-Pacific region.

SYMPOSIUM 4

Transforming Preventive Dentistry through Digital Health Technologies

2 October · 10:15–11:45 · Vista 1 & 2

Moderator: Professor Dr Chun Hung Chu

Professor Dr. Ollie Yiru Yu

The University of Hong Kong

BIOGRAPHY

Dr. Ollie Yu is the Assistant Dean in Knowledge Exchange and a Clinical Assistant Professor in Cariology at the Faculty of Dentistry, The University of Hong Kong. She holds fellowships from several professional colleges (FDS RCSEd; FDS RCS Eng; FDS RCPS(Glasg); FHEA; FICD). Dr Yu has been recognized as one of the World's Top 2% scientists on the Stanford/Elsevier List and has authored over 90 articles in peer-reviewed international journals. Her team has presented more than 40 studies at international conferences and received multiple prestige awards such as the IADR Innovation in Oral Care Award, IADR Colgate Research in Prevention Travel Award, IADR Cariology Research Group Award, AAPD Outstanding Researcher Award, IADR-SEA Research Category Award, and SEAADE Innovation Award. She serves as Assistant Specialty Chief Editor of *Frontiers in Oral Health*, and is an editorial board member of *BMC Oral Health* and *Scientific Reports*. She also serves as the Vice President of the Society of Preventive Dentistry of Hong Kong. She has been invited to deliver lectures and workshops at international and regional conferences. Her clinical and research interests focus on caries detection, minimal intervention dentistry, and digital dentistry and artificial intelligence for caries control.

ABSTRACT

How AI is Shaping the Future of Primary Dental Disease Prevention

The high prevalence of preventable oral diseases highlights the limitations of traditional, treatment-oriented dental care. Artificial intelligence (AI) offers an opportunity for a paradigm shift, moving the focus from reactive intervention to proactive prevention. By leveraging machine learning, AI analyzes vast datasets such as clinical images, health records, behavioral patterns, and lifestyle factors to generate highly accurate, personalized data for risk assessments. This data-driven approach enables targeted preventive interventions tailored to individual needs. This evolution promises not only to improve oral health outcomes but also to reduce long-term healthcare costs by prioritizing health maintenance. This lecture will explore AI's key applications and impact in primary dental disease prevention. Additionally, the current barriers of clinical implementation, including ethical and integration challenges, and future perspectives for AI-driven preventive oral healthcare will be discussed.

SYMPOSIUM 4

Transforming Preventive Dentistry through Digital Health Technologies

2 October · 10:15–11:45 · Vista 1 & 2

Moderator: Professor Dr Chu Chun Hong

Associate Professor Dr. Hoang Trong Hung

Pham Ngoc Thach University of Medicine, Vietnam

BIOGRAPHY

Dr. Hoang Trong Hung, DDS, MSc, PhD, FICD, is Vice-Dean, Faculty of Dentistry, and Director, Oral Health Academic Center, at Pham Ngoc Thach University of Medicine, Vietnam. He currently serves as Regent of Vietnam ICD Region 31, Vice-President of the Vietnam Odonto-Stomatological Association (VOSA), Vice-President of the Ho Chi Minh City Odonto-Stomatological Association (HOSA), Immediate Past President of the IADR Southeast Asia Division and Councilor of the Southeast Asia Association for Dental Education (SEAADE). He obtained his DDS in 1995, MSc in 2003, and PhD in 2017. His main research interests include oral disease epidemiology, preventive dentistry, behavioral sciences in oral health, and dental education. More recently, his work has expanded into digital and AI innovations in public health dentistry, including the development of VOSER, SegmentAnyTooth, and AI-driven models for caries detection and orthodontic assessment. He has been an invited speaker at numerous national and international conferences and has received several international awards for his scientific contributions.

ABSTRACT

Digital Tech & AI in Preventive Dentistry: Perspectives from Contemporary Dental Education Curriculum

Digital technology and artificial intelligence (AI) are redefining preventive dentistry and transforming how future dentists must be trained. This lecture discusses how contemporary dental curricula should integrate digital tools and AI-driven approaches to strengthen risk-based, early, and personalized prevention. From AI-assisted caries detection and predictive analytics to digital epidemiology and teledentistry, emerging technologies enable more accurate diagnosis, better risk stratification, and data-informed decision-making. However, meaningful impact depends on structured curricular integration — not merely technological exposure. Drawing on regional curriculum innovation experiences, the lecture outlines key competency domains: digital literacy, AI-supported clinical reasoning, preventive care planning frameworks (e.g., risk-based models), data ethics, and interprofessional collaboration — especially in managing non-communicable diseases. Aligned with the WHO Oral Health Action Plan 2030, this session emphasizes that AI in preventive dentistry represents a paradigm shift in education. The future preventive dentist must be digitally competent, ethically grounded, and system-oriented to lead sustainable oral health transformation.

SYMPOSIUM 4

Transforming Preventive Dentistry through Digital Health Technologies

2 October · 10:15–11:45 · Vista 1 & 2

Moderator: Professor Dr Chu Chun Hong

Professor Emeritus Dr. Rosnah Md Zain

MAHSA University, Malaysia

BIOGRAPHY

Professor Emeritus Dr. Rosnah Zain is a clinician-scientist specialising in oral pathology and oral medicine, with a research focus on oral mucosal lesions and oral cancer. She has contributed to the standardisation of diagnostic criteria, early detection strategies, and translational research in oral oncology, and in recent years has led work integrating digital technologies and artificial intelligence into oral cancer screening, diagnosis and education, including AI-driven mobile-based screening platforms. A former Dean of the Faculty of Dentistry at both Universiti Malaya (2010–2014) and MAHSA University (2017–2023), she currently serves as Deputy Vice Chancellor (Research, Innovation & Enterprise) at MAHSA University, and was conferred the title of Professor Emeritus from University of Malaya in December 2024.

ABSTRACT

Digital Health Technologies for Early Detection of Oral Cancer: Opportunities, Challenges and Future Directions

Oral cancer remains a major global health challenge, with high morbidity and mortality largely resulting from delayed diagnosis. Although the oral cavity is readily accessible for examination, many patients continue to present with advanced disease, particularly in low- and middle-income countries where access to specialist care is limited. Early recognition of oral potentially malignant disorders (OPMDs) and early oral cancer remains the key strategy for improving patient outcomes. Advances in digital health technologies are creating new opportunities to support prevention, facilitate earlier detection, and improve access to timely care. This presentation provides an overview of how digital technologies are transforming oral cancer prevention and early detection. Smartphone-based intraoral imaging, tele-dentistry, artificial intelligence (AI), digital pathology, cloud-based referral systems, and mobile health (mHealth) applications are improving screening, referral, diagnosis, and follow-up care. These technologies can support more consistent clinical decision-making, strengthen referral pathways, and extend specialist expertise to underserved communities. Using examples from Malaysia and the ASEAN region, the presentation will further highlight how digital innovations are being applied to community screening and clinical practice. It will also discuss key challenges, including technology validation, ethical and regulatory considerations, digital inequity, and workforce readiness. Finally, future developments such as integrated digital health systems, predictive analytics, digital biomarkers, and precision prevention will be explored. Used responsibly alongside evidence-based clinical practice, digital health technologies have the potential to strengthen preventive dentistry, promote earlier detection, and improve outcomes for patients with oral cancer.

Associate Professor Dr. Wong Mun Loke

National University of Singapore

BIOGRAPHY

Dr. Wong Mun Loke is Associate Professor and has been involved in dental education for over two decades. He is Vice Dean (Education) at the Faculty of Dentistry, National University of Singapore, where he oversees the design, planning and review of the Bachelor of Dental Surgery curriculum, and teaches undergraduate Dental Public Health and Behavioural Science. His interests centre on applying preventive dentistry and behavioural science in clinical practice to promote oral health. At the postgraduate level, he played an instrumental role in developing the Graduate Diploma in Geriatric Dentistry, launched in 2019, and serves as a Council Member of the South East Asia Dental Education Association (SEAADE). He is also active in advancing inter-professional education in healthcare training, contributing to the communication courses in NUS's Common Curriculum for Health Professional Education, which spans Medicine, Nursing, Pharmacy and Dentistry. In his current role as Associate Provost (Integrated Education), he works on how formal and informal curricula can complement each other to enhance students' holistic educational experience across the University.

ABSTRACT

Oral Health Literacy and its Value Proposition for Oral Health Promotion

Dental caries and periodontal disease remain the two most common oral diseases which affect the population. Poor oral health can exert a significant impact on the overall wellbeing of individuals. The promotion of oral health and prevention of oral diseases is therefore pivotal in helping individuals and populations embrace holistic health. Oral health literacy is an important part of overarching public health strategies to promote oral health. This presentation revisits the concept of oral health literacy, highlights its value in the context of oral health promotion and key considerations in advancing oral health literacy among individuals and populations.

Dr. Melissa Adiatman

Universitas Indonesia

BIOGRAPHY

Dr. Melissa Adiatman, PhD, in the Department of Dental Public Health and Preventive Dentistry, Faculty of Dentistry, Universitas Indonesia. She holds a PhD in Oral Health Promotion from Tokyo Medical and Dental University, Japan, where her research focused on geriatric oral health, recognised with the IADR's J. Morita Junior Investigator Award for Geriatric Oral Research. Her work spans oral health promotion, gerodontology, preventive and behavioural dentistry, oral health literacy, epidemiology, and health services research, with recent work addressing healthy ageing, access to essential oral healthcare, and the integration of oral health into broader health systems. She is Past President of the Asian Academy of Preventive Dentistry (2025–2026) and current Chair of the Indonesian Association of Dental Public Health and Preventive Dentistry.

ABSTRACT

From Information to Action: Oral Health Literacy for Healthier Populations in the Digital Age

Oral health literacy is increasingly recognized as an important determinant of oral health and a foundation for effective prevention. Beyond the ability to read or understand health information, contemporary health literacy encompasses the capacity to access, understand, critically appraise, and use information and services to make appropriate health decisions. Importantly, these abilities are shaped not only by individuals, but also by the responsiveness of healthcare organizations, communities, and information environments. Evidence increasingly links oral health literacy with preventive behaviours, healthcare utilization, and oral health outcomes across the life course. Recent findings among independent older adults in Indonesia using the Health Literacy in Dentistry-29 (HeLD-29) similarly demonstrate associations between oral health literacy, sociodemographic characteristics, oral health behaviours, and clinical oral health status. Such findings reinforce the need to move beyond conventional health education towards communication and services that enable people to translate knowledge into action. The digital environment adds a new dimension to this challenge. Social media provides unprecedented access to oral health information while simultaneously exposing populations to misinformation, commercial influence, and content of variable quality. Emerging concepts such as social media oral health literacy, and instruments including the Social Media Oral Health Literacy Questionnaire (SMOHLQ), emphasize the ability to access and understand digital information, critically assess its credibility, and determine whether it should influence behaviour. This presentation proposes an adapted translational framework — Access, Understand, Appraise, Act and Enable — for translating oral health literacy into population health. It will explore practical opportunities through professional communication, community-based prevention, digital platforms, and health-literate services. In alignment with the WHO Global Oral Health Action Plan 2023–2030, strengthening oral health literacy should be viewed not merely as patient education, but as a strategic component of prevention, equity, primary healthcare, and healthier populations.

SYMPOSIUM 5

Dr. Habibah Yaacob

Oral Health Programme, Ministry of Health Malaysia

BIOGRAPHY

Dr. Habibah Yacob is a Consultant Dental Public Health Specialist and currently serves as the Director of the Oral Health Policy and Strategic Planning Division, Oral Health Programme, Ministry of Health Malaysia. She obtained her Bachelor of Dental Surgery degree in 1993 and a Master of Community Medicine (Oral Health) in 2006 from Universiti Sains Malaysia. With extensive experience in dental public health, epidemiology, health systems research, and biostatistics, Dr. Habibah has played a pivotal role in strengthening evidence-based oral health policy and strategic planning in Malaysia. Among her notable achievements are the development and validation of the Malaysia Oral Health Literacy Index and related training modules, which have strengthened the assessment and promotion of oral health literacy at the population level. Her current work focuses on the formulation, implementation, and evaluation of the National Oral Health Policy and Plan for Malaysia 2021–2030, the Action Plan for the Oral Health Programme 2026–2030, and the integration of evidence-based, person-centered, and equity-oriented approaches to oral health service delivery.

ABSTRACT

Advancing Oral Health Literacy and Population Health

Oral health literacy plays a critical role in improving population health by empowering individuals to understand, access, and utilize dental care effectively. This paper explores strategies to advance oral health literacy through education, community engagement, and healthcare integration. Emphasizing the importance of clear communication and culturally sensitive approaches, it highlights how enhanced literacy can lead to better prevention, early detection, and management of oral diseases. The paper also discusses policy initiatives and collaborative efforts needed to reduce disparities in oral health outcomes across diverse populations. By promoting oral health literacy, communities can achieve improved overall health, reduced healthcare costs, and enhanced quality of life.

SYMPOSIUM 6

Preventive Dentistry for Ageing Population: Ensuring Quality of Life and Independence

2 October · 13:45–15:15 · Vista 1 & 2

Moderator: Professor Dr Hiroshi Ogawa

Professor Dr. Sri Susilawati

Universitas Padjadjaran, Indonesia

BIOGRAPHY

Dr. Sri Susilawati, drg., M.Kes, is Professor of Dental Public Health at the Faculty of Dentistry, Universitas Padjadjaran. Her research interests encompass preventive dentistry, community oral health, and their association with quality of life, with a primary focus on school-aged children and older adults as target populations. These research findings have been published in international/national journals, presented at scientific conferences and academic forums, and have contributed to the publication of several reference books. She is currently undertaking research on the development of a digital application utilizing machine learning algorithms for the early detection of tooth loss among older adults based on identified risk factors. Beyond research activities, her involvement extends to the development of the National Oral Health Plan and the formulation of national oral health policy documents. She is engaged in community service initiatives, including the delivery of oral health education programs for older adults through various media platforms. She plays an active role in the development of national competency standards for dentists and serves as Chair of the Quality and Accreditation Division of the Indonesian Dental Association.

ABSTRACT

Preventive Dentistry for Older Adults: Aligning Oral Health with Indonesia's Health Transformation

Indonesia is experiencing a rapid demographic transition, with a steadily growing older adult population that has increased the demand for comprehensive oral healthcare. Recent findings from the Indonesian Health Survey and the National Free Health Check/Screening Program reveal a substantial burden of oral diseases among older adults, particularly dental caries, periodontal disease, tooth loss, and unmet treatment needs, all of which significantly affect nutrition, systemic health, functional ability, and quality of life. Recognizing these challenges, Indonesia's National Oral Health Action Plan 2026–2030 has established a target to ensure that at least 50% of the population, including older adults, has access to essential oral healthcare services. Aligned with Indonesia's Health Transformation Agenda, achieving optimal oral health among older adults is guided by four strategic pillars, including health promotion and disease prevention, strengthening oral healthcare services, governance, workforce development and sustainable financing, as well as health information systems and research. Implementation of this strategy has been driven by strong collaboration among government agencies, professional organizations, universities, healthcare providers, schools, communities, and other stakeholders. This collaborative approach has strengthened the integration of preventive oral healthcare into primary healthcare services and community-based oral health programmes, fostering shared responsibility for improving oral health outcomes among older adults. Strengthening preventive dentistry through integrated health system transformation represents a sustainable pathway towards improving oral health among older adults. Indonesia's experience offers valuable insights into how prevention-oriented policies and multisectoral collaboration can strengthen oral health systems and support healthy ageing.

SYMPOSIUM 6

Preventive Dentistry for Ageing Population: Ensuring Quality of Life and Independence

Professor Dr. Michelle Segarra

University of the Philippines College of Dentistry

BIOGRAPHY

Dr. Michelle Segarra is Professor and Dean of the University of the Philippines College of Dentistry, where she has been a faculty member since 1992. She holds a PhD in Dental Sciences (Cariology and Operative Dentistry) from Tokyo Medical and Dental University, completed under Professor Junji Tagami, and her research centres on optical coherence tomography for diagnosing enamel cracks, alongside work on calcium phosphate technologies and fluoride for remineralisation, preventive dentistry, and teeth whitening. She has been in private general dental practice since 1992, with a focus on adhesive restorations and paediatric patients, and lectures widely on cariology, adhesive dentistry and preventive dentistry.

ABSTRACT

Caring for Oral Health and Improving the Quality of Life Among the Elderly in the Philippines

2025 data shows that there are 10.9 million senior citizens (60 years old and above) in the Philippines. This is 9.6% of the country's 113.7 million population. The Philippines is approaching an aging society and it is predicted that there will be 23.7 million elderly by 2050. It is thus important that the Philippines set up programs for the oral health of the aging population. Common health problems among the elderly include periodontal diseases, root caries, dry mouth, tooth loss and dentures, oral cancer among others, which are compounded by limited access to dental care and financial constraints. Data from the Economic Research Institute for ASEAN and East Asia in 2019 shows that 32% of older Filipinos suffer from complete tooth loss, with the rate climbing higher among older individuals; only 60% of those with no remaining teeth have dentures; and many elderly, especially those who are institutionalized, have high rates of untreated caries. A published study in 2024 shows that periodontal disease affects 83.58% of Filipinos aged 65 to 74. As poor oral health affects quality of life, the government and private sectors including dental academic institutions are setting up programs and interventions to improve the elderly population's quality of life. The inclusion of oral health services in the Universal Health Care (UHC) Act (Republic Act 11223) and alliances between organizations such as the National Commission of Senior Citizens (NCSC) and the Philippine Dental Organizations will ensure that oral healthcare is integrated into overall health towards elderly well-being. Accessibility and awareness programs are being advocated. In the academic setting, geriatric dentistry and special care dentistry have been integrated in the undergraduate dental curriculum since 2018. This brief presentation will discuss in detail the oral health status of the elderly in the Philippines and the actions being done to improve their oral health and their quality of life.

SYMPOSIUM 6

Preventive Dentistry for Ageing Population: Ensuring Quality of Life and Independence

2 October · 13:45–15:15 · Vista 1 & 2

Moderator: Professor Dr Hiroshi Ogawa

Professor Dr. Youn-Hee Choi

Kyungpook National University, Korea — President, KAPDOH

BIOGRAPHY

Dr. Youn-Hee Choi is Professor and Dean at Kyungpook National University School of Dentistry, Republic of Korea, and President of the Korean Academy of Preventive Dentistry and Oral Health. She holds a PhD in Epidemiology from the University of South Carolina, USA, and a PhD/MPH in Public Health from Yonsei University, Korea. Her research focuses on the epidemiological links between oral disease and systemic health, with particular emphasis on aging populations, oral frailty, and cognitive function, drawing on large-scale national oral health surveys and health insurance data. She is active in international professional organisations including the FDI World Dental Federation, and has received national recognition for her contributions to public oral health, including honours from Korea's Disease Control and Prevention Agency.

ABSTRACT

Oral Frailty and Hypofunction in Korea's Super-Aging Society: Current Status and Perspective

Korea, like many countries worldwide, has entered a super-aging society, with a rapidly growing older population and rising socioeconomic burden. Remarkably, Korea reached an aging society (7% of the population aged 65 or older) in 2000, and is projected to transition from an aged society (14%) to a super-aged society in just 7–8 years — an unprecedented pace in human history. This rapid demographic shift underscores the urgent need to address factors that influence health and functional independence in later life. Oral frailty and oral hypofunction have recently been defined as important clinical conditions reflecting declines in oral function. These conditions are closely associated with general frailty and systemic health, and have become key determinants of healthy aging and quality of life. Maintaining oral function is therefore essential for preventing frailty and supporting active and independent living among older adults. From a broader perspective, concepts such as anti-aging and healthy longevity have gained increasing attention. Preventing oral frailty is emerging as a key component of these strategies, contributing not only to maintaining oral function but also to promoting overall functional health and longevity. Effective prevention requires not only individual efforts but also comprehensive approaches at the community and national levels. In particular, integrated strategies within public oral health, along with active involvement of dental professionals, including dentists and dental hygienists, are essential to manage and prevent oral functional decline in a super-aging society. Addressing oral frailty and hypofunction through multidisciplinary and population-based strategies is therefore crucial for supporting healthy aging, preserving functional independence, and improving quality of life among older adults in Korea's rapidly aging society.

ORAL SESSION 3

30 September 2026

No	Presenters ID	Timing	Presenter's Name	Research Title
1	OP11	2.30pm - 2.39pm	Xiaoli Zeng	Intervention Effect of Risk-Stratified Caries Management in 3-Year-Old Children
2	OP12	2.40pm - 2.49pm	Jiang Chloe Meng	Comparative Infodemiological Analysis on Public Perceptions of Fluoride: TikTok vs Douyin
3	OP13	2.50pm - 2.59pm	Al-Imran Shahrul Naing	Oral Hygiene during Fixed Appliance Treatment: A TikTok and Youtube Netnography
4	OP16	3.00pm - 3.09pm	Ruzawani Ruslan	Tobacco Use Patterns, Smoking Behaviour, and Cessation Attempts Among Malaysian Armed Forces Personnel
5	OP17	3.10pm - 3.19pm	Pang Khyun Lee	Patient Perception towards Dental Visits during COVID I-19 Pandemic: A Cross Sectional Study
6	OP18	3.20pm - 3.29pm	Risqa Rina Darwita	Dietary Pattern as a Risk Factor for Dental Caries among Primary School Children
7	OP53	3.30pm - 3.39pm	Geraldo Hendri	Teacher Empowerment Training for Dental Health Education Using Pop-Up Books and Snakes-Ladders at SRMP Cimahi
8	OP70	3.40pm - 3.49pm	Nur Adilah Mohd Nor	A Survey on the Competency of Dental Officers in Orthodontic Referral
9	OP71	3.50pm - 3.59pm	Sandra I. Batua	Access as Prevention: PWD Accessibility Audits at the University of the Philippines College of Dentistry

ABSTRACTS LIST

Oral Presentation

ORAL SESSION 4

01 October 2026

No	Presenters ID	Timing	Presenter's Name	Research Title
1	OP20	3.30pm - 3.39pm	Wang Jingyu	Characterising Respiratory Pathogen Profiles on Removable Prostheses with Different Hygiene Status in Long-Term Care Facilities
2	OP21	3.40pm - 3.49pm	Xiaoqian Chen	Hyperlipidemia Accelerates Aging of Pulpo-dentinal Complex by Inflammatory Response Stimulation
3	OP22	3.50pm - 3.59pm	Wan Nur Alwani Wan Abdul Aziz	LPS-Induced Inflammation Upregulates Gene Expression and Alters Primary Cilia Length in Human Periodontal Ligament Fibroblasts
4	OP23	4.00pm - 4.09pm	Yongliang Jia	Screening of Bioactive Compounds from <i>Paris polyphylla</i> var. <i>yunnanensis</i> to Prevent <i>Streptococcus mutans</i> Biofilm Formation
5	OP24	4.10pm - 4.19pm	Ke Xue	Effect and Mechanism of <i>Paris polyphylla</i> var. <i>yunnanensis</i> Extract on Inhibiting Adhesion of <i>Streptococcus mutans</i>
6	OP25	4.20pm - 4.29pm	Zhang Shinan	Capability and Mechanism of Melanin Synthesis in <i>Arachnia rubra</i> E10012 and <i>Arachnia propionica</i> E1715
7	OP26	4.30pm - 4.39pm	Guo Haiying	The Oral Microbiome Circadian Dynamics in Patients with Alzheimer's Disease
8	OP27	4.40pm - 4.49pm	Ruiyu Veronica Ma	A Non-Discoloring Bioactive Hydrogel for Caries Management: An In Vitro Study
9	OP28	4.50pm - 4.59pm	Philmer James Garcia Manio	Biomimetic Remineralization with Novel Dual-Function Gels
10	OP29	5.00pm - 5.09pm	Qin Qing	Human Deciduous Pulp Stem Cells with CRISPR/Cas9 for Duchenne Muscular Dystrophy Mechanisms
11	OP30	5.10pm - 5.19pm	Porntheera Pantienthong	Influence of Adhesive Bonding and Lithium Disilicate Thickness on the Final Color of Ultra-Thin Veneers

ABSTRACTS LIST
